PERSONAL PROJECTS

devjobs

- Implemented a dynamic jobs board using **React** and **Tailwind CSS**, inspired by a design from Frontend Mentor. The project fetches job data from a local data.json file, allowing users to filter jobs by title, location, and position type (full-time).
- Dark mode and responsive design ensures an optimal user experience across various devices.

- Github: <https://github.com/adnanansari8173/devjobs>

TaskGo

- Developed a beautiful Todo List application using **React** and **Tailwind CSS**. TaskGo allows users to seamlessly manage tasks by adding titles and descriptions, updating, and deleting tasks.
- Implemented a confirm modal for secure deletion and utilized Toastify for custom notifications. Leveraged local storage to persist data, ensuring task persistence even after page refresh.
